for further details and to watch a short video

8 lane (13,5 m) regatta course at Crefelder Ruder-Club in Germany.

6 lane (13,5 m) regatta course at Huacho in Peru.

Floattech's factory in Värnamo, Sweden.

8 lane (12,5 m) regatta course at Račice in Czech Republic.

Any Pontoon Length Is Standard

Being fully modular EasyStart offers great flexibility in length and width of the sliding- and walking pontoon.

Flexible Holder's Platform

The soft surface of the holder's platform may be adjusted 300 mm in height which provides a comfortable position for any sized holder.

Accurate Positioning

Two spring loaded locking bolts allow rapid and safe positioning of the sliding pontoon at intervals of 150 mm.

Easy Operation

Stainless steel guide ways and maintenance-free roller bearings make operation of the sliding pontoon rapid and almost frictionless.

Cost Effective Transport And Installation

EasyStart is shipped assembled on a standard truck, or in a 40' container which makes the installation rapid and cost effective.

Safe Operation

Walking and sliding pontoons being on the same level, offer the operational staff a surface free from steps. The sliding mechanism is fully concealed to avoid injuries caused by crushing.
